

UNITED STANDARD INDUSTRIES, INC.

Comprehensive Quality Manufacturing

Services

United Standard Industries, Inc. is a diversified manufacturing company producing parts and assemblies from one to one million. USI has the ability to manufacture precision piece parts as well as integrated assemblies.

We manufacture parts for the hydraulic, defense, automotive, medical and related industries. We are certified to ISO 9001:2008.

The following in-house services are provided:

- Manufacturing
- Engineering
- Testing
 - Hydraulic
 - Mechanical
 - Electrical
- Inspection
- Painting
- Stamping/Die Cutting
- Assembly
- Silk screening and marking
- Specialized packaging

United Standard Industries, Inc. is housed in a 35,000 square foot air-conditioned building.

Our equipment includes three, four and five axis machining centers and 2 and 4 axis turning with 7 axis (multi-tasking with twin spindles and twin live tooling turrets) and 10 axis twin spindle and twin turret Swiss turning centers. USI has dozens of conventional machines including mills, lathes, grinders, hones, saws and die cutting equipment.

Our cutoff department consists of automatic cut-off saws, with capacities up to 14 inches in diameter.

We have a complete grinding department which includes cylindrical grinding and surface grinding. We also have our own tool room grinders and vertical and horizontal honing equipment.

USI uses computer assistance (CAM) in manufacturing. The computers are used for complex mathematical computations and for generating numerical control programs. To assist production control in tracking orders, we have a computerized production control system listing the status of every job and the projected due date. Our customers can call and get instant status on their orders. USI prides itself on quality, service, attention to detail and working within competitive cost parameters.

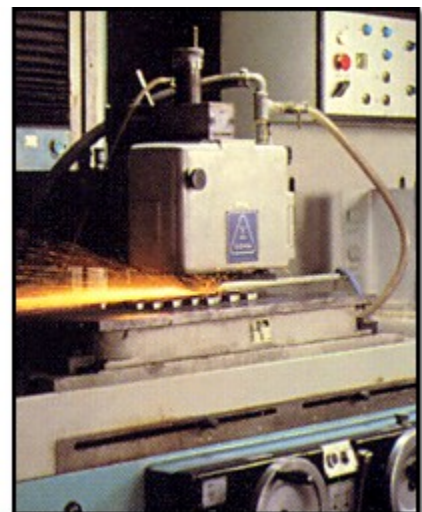

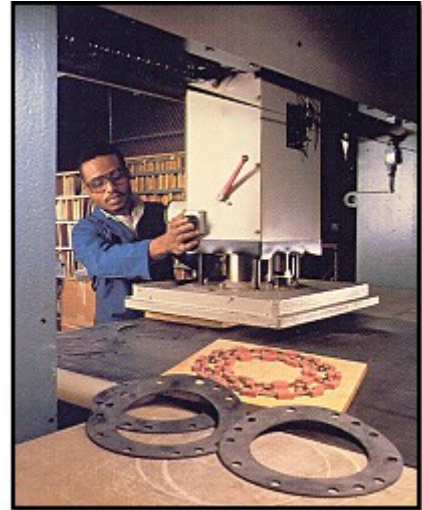

In handling the secondary manufacturing processes, we limit our customers' costs and liability to a complete product.

We manufacture from ferrous and non-ferrous materials, bar stock, plate, castings, forgings, rod and sheet.

Our Quality Control Department employs only the latest inspection techniques and equipment and is staffed with highly trained inspectors. This allows us to do incoming, in-process and final inspection in a timely manner to insure our customer an on-time, quality product.

We offer "Just In Time" shipments at no extra cost and provide customers with cost saving ideas.

Customers are handled on an individual account basis. Each customer is assigned a personal account executive.
